Hello,

I commute on the Oak-Gillham bike lanes weekly on my bike. I certainly know that I am riding more safely on them compared to sharing the road lane with motorists. I know from the example of European nations and others that our non-motor and motor integrated infrastructure needs to improve, but not be removed. I am calling on our city's leadership to network and consult with and also select and hire the expertise and resources that have produced successful proven infrastructure integration to help Kansas City. We need a master plan and then build out that plan. We here in Kansas City need to improve not remove integrated motor/non-motor infrastructure.

Chad Murray
