Hello there,

My husband and I are avid bike riders in KCMO and support adding a network of protected bike lanes to our city roads. I have talked to many people who have bicycles, but know that our city roads can be dangerous and won't ride their bicycles on them. Additionally, I can name friends who have been struck by cars while riding their bike. A network of protected bike lanes would make a huge difference for many more people to bike to work and for recreational purposes, which will also increase our carbon footprint as a city and improve our health as a city for the young and old.
Thank you for taking this into consideration.
