Industrial High CFM Vacuuming and Power Rodding &		
Liquid Sludge Waste Hauling		

Details

Reason for Contract

To provide specialty services and equipment for cleaning of sewer collection system pipe lines; to utilize such services at wastewater treatment and pumping facilities and to ensure continued operational reliability to protect the environment and the public health.

Discussion

Project Justification

The wastewater utility consists of 2800 miles of sewer line and over 60 treatment and pumping facilities. In the combined sewer areas runoff collects debris such as limbs and trash which create blockages and need to be cleared. In the sanitary system the flow contains plastics, grease and other household constituents which clog pipes and create blockages that need to be cleared immediately. These services are regularly required in treatment and pumping facility pipe lines, tanks, and process equipment during maintenance to enable maintenance and odor control. This contract provides the availability of specialized rolling stock and equipment to achieve efficient resolution to ensure public health and operational reliability.

Project Description

Operations of the wastewater collection, pumping, and treatment system within the City's 320 square miles requires emergency and non-emergency response for maintenance of the system. Several divisions within the Water Department are responsible for different portions of the system. This contract will provide for tasking the selected vendor to provide the required equipment, vehicles, and specialty equipment with defined response times.
