How will this contribute to a sustainable Kansas City?	<p>This project consists of platting to create one residential lot for 23 unit multi-family development on 2.478 acres of previously vacated properties. The proposed development will increase the area of impervious surfaces through the use of pavement and buildings. The existing peak rate of storm water discharge and total runoff volume discharging the property will be maintained after development. This development will increase the tax base for the developed lots and will provide ample permanent greenspace within the development.</p> <p>Written by Lucas Kaspar, PE</p>
