---

Dear Neighborhoods Planning and Development Committee,

I urge you to ask for amendments to the currently proposed zoning code being brought to the Neighborhoods Planning and Development committee on Dec. 9th. The zoning code proposed for data centers, as currently drafted, is insufficient in protecting the interests and health of everyday Kansas Citizens.

My primary concerns center around increased burden on our energy infrastructure, the lack of property tax contributions/ proposed tax breaks for these companies, and the environmental issues like clean water access and pollution. All this without getting into the ethical implications of AI. As a northland dweller I will disproportionately be affected by these data centers and urge you to consider making this better for your citizens.

I urge you to be proactive about minimizing these harms by creating a zoning code that allows for more oversight in the following ways. The data center zoning code should:

1. Be its own zoning code rather than lumped in with Large Format Uses.
2. Require special-use permits for data centers that are voted on and approved by the city council.
3. Include environmental impact studies.
4. Include environmental protections such as limiting water usage/cooling requirements and limiting fossil-fuel generators (including back-ups).
5. Require utility demand disclosure.
6. Require ample distance from residential neighborhoods.

If data center development is allowed to continue as is, Kansas Citizens will be forced to bear the brunt of the cost of utility rate increases, resource extraction, and pollution. Do right by Kansas Citizens and demand a more thorough zoning code for data centers.

Thank you,

Amy Cummings
