Hi,

I'm a concerned citizen living in Kansas City and have been following the news about a two data centers in the works in Kansas City — one at KCI Logistics off of I-29 and Mexico Avenue near the airport and one at I-435 and 169 highway.

I am gravely concerned about the negative ramifications that these data could have on our local environment, water resources, energy bills and energy consumption. Data centers are known to deplete local water sources, affect water pressure for residents, pollute the air and water and make energy bills for local residents soar.

Data centers are being built at a rapid rate across the nation, with two just in the Northland in the last year — the Meta data center near Smithville and the Google data center near Worlds of Fun that should be operating soon. Our energy bills saw a significant increase this summer, and I fear that four new data centers in Kansas City will make this worse. Just this September, [Ameren shut off power to 15,000 Missouri rate payers who could not pay their energy bills](#).

I am urging you to draw awareness to these proposed data centers and ask important questions about the impact they will have on our community. I am concerned about the economic strain of increased residential energy bills and the demand that's put on our local power grid and water resources. I am also increasingly concerned about the lack of regulation around these data centers, as the city does not vote on building projects and cannot stop these projects once they are zoned.

I would like Kansas City to update its zoning codes to create a new category for data centers and I would like the city to place a one-year moratorium on the construction of data centers until we can figure out the impact it has on our community and create better regulation around them. Data centers often promise to use renewable energy and to replenish water, but there are rarely checks on these promises and once they are built, I fear they operate with little oversight, causing Kansas City residents to foot the bill for their massive energy and water usage.

I would like to voice my opposition to these Kansas City data center construction projects without further regulation.

--

Date Fri 10/24/2025 10:44 AM

To cc 1 <cc1@kcmo.org>; MayorQ <MayorQ@kcmo.org>

EXTERNAL: This email originated from outside the kcmo.org organization. Use caution and examine the sender address before replying or clicking links.

Hi,

My name is Laura Cross and I am a healthcare worker and small business owner in Kansas City. I am very concerned about the news regarding two data centers in the works in Kansas City — one at KCI Logistics off of I-29 and Mexico Avenue near the airport and one at I-435 and 169 highway.

I am gravely concerned about the negative ramifications that these data could have on our local environment, water resources, energy bills and energy consumption. Data centers are known to deplete local water sources, affect water pressure for residents, pollute the air and water and make energy bills for local residents soar. If you look at any data available on the quality of lives of those who live near data centers, I think it's simple to understand why these would be a HUGE detriment to Kansas City. I genuinely would consider moving from Kansas City to a different city that prioritizes its citizens' well being if the plan continues to move forward.

Data centers are being built at a rapid rate across the nation, with two just in the Northland in the last year — the Meta data center near Smithville and the Google data center near Worlds of Fun that should be operating soon. Our energy bills saw a significant increase this summer, and I fear that four new data centers in Kansas City will make this worse. Just this September, [Ameren shut off power to 15,000 Missouri rate payers who could not pay their energy bills](#).

I am urging you to draw awareness to these proposed data centers and ask important questions about the impact they will have on our community. I am concerned about the economic strain of increased residential energy bills and the demand that's put on our local power grid and water resources. I am also increasingly concerned about the lack of regulation around these data centers, as the city does not vote on building projects and cannot stop these projects once they are zoned.

I would like Kansas City to update its zoning codes to create a new category for data centers and I would like the city to place a one-year moratorium on the construction of data centers until we can figure out the impact it has on our community and create better regulation around them. Data centers often promise to use renewable energy and to replenish water, but there are rarely checks on these promises and once they are built, I fear they operate with little oversight, causing Kansas City residents to foot the bill for their massive energy and water usage.

I would like to voice my strong opposition to these Kansas City data center construction projects.

KC Spirit Playbook: Large Format Usage (Data Centers)

From Katie Currid <katiecurrid@gmail.com>

Date Wed 10/22/2025 2:15 PM

To Reinhardt, Jennifer <Jennifer.Reinhardt@kcmo.org>

Cc Elliott, Kyle <Kyle.Elliott@kcmo.org>; Williams, Gerald <Gerald.Williams@kcmo.org>; Rogers, Wes <Wes.Rogers@kcmo.org>; Justis, Amy <Amy.Justis@kcmo.org>

EXTERNAL: This email originated from outside the kcmo.org organization. Use caution and examine the sender address before replying or clicking links.

Ms. Reinhardt,

I was directed to email you by Mr. Rogers' office regarding my concerns over data centers being built in the Northland. I see that you are on the team behind the KC Spirit Playbook, and I believe you are seeking public comment on large format uses, which include data centers, in upcoming meetings.

I'm a Platte County resident and am looking to voice major concerns I have over data centers, especially because so many are being built in the Kansas City area. I live in the Northland, and we have the new Meta data center near Smithville, an almost-finished Google data center near Worlds of Fun, and two more data centers in the worlds — one near the airport and one across from the Meta data center.

I am highly concerned about the environmental impacts of these data centers, as well as the economic impact they will have on local residents. Port KC's press release about Project Mica, the new I-435/169 data center, says it will use 700 MW of power — which, by my estimates, is nearly two-thirds of Kansas City's peak usage. Data centers of this size also use one to five millions of gallons of water a day. If we continue saying yes to these tech companies, we are at a major risk of supply and demand issues for our most basic utility resources, and I fear that Kansas Citians will bear the brunt of the cost. Just this September, Ameren shut off power to 15,000 rate payers — what happens when our power grid is further filled up with data centers?

I have many thoughts on how Kansas City can add regulation around data centers. If my research is correct, I see that the KCI Logistics data center near the airport is being zoned in their MPD as "communications service establishment," which I fear does not adequately address the massive impact it has on energy usage, as well as noise. I think Kansas City needs a new category for data centers.

I also want to see further checks and balances when tech companies promise to use "renewable energy" and "replace water resources." I fear many of these promises will be unfulfilled, and I feel that our city is being bought off by tax revenue to our schools. I'm not sure if this could be achieved by planning and zoning.

I have seen other cities place a one-year moratorium on data center construction, such as in St. Charles, Missouri, and I think this may be an avenue to consider, given the huge impact these data centers have on our communities and the questions that have been unanswered surrounding them.

I see that you are hosting a meeting for public comment on November 5 and I have registered to attend (likely online — I have a baby at home!). If you have any other thoughts on how I can weigh in on the data center problem in Kansas City, I am eager to hear of further avenues.

Thank you so much for your time!

Good morning,

I'm a concerned citizen living in Kansas City and have been following the news about two data centers in the works in Kansas City — one at KCI Logistics off of I-29 and Mexico Avenue near the airport and one at I-435 and 169 highway.

I am *gravely* concerned about the negative ramifications that these data could have on our local environment, water resources, energy bills and energy consumption. Data centers are known to deplete local water sources, affect water pressure for residents, pollute the air and water and make energy bills for local residents soar.

Data centers are being built at a rapid rate across the nation, with two just in the Northland in the last year — the Meta data center near Smithville and the Google data center near Worlds of Fun that should be operating soon. Our energy bills saw a significant increase this summer, and I fear that four new data centers in Kansas City will make this worse. Just this September, [Ameren shut off power to 15,000 Missouri rate payers who could not pay their energy bills](#).

I am urging you to draw awareness to these proposed data centers and ask important questions about the impact they will have on our community. I am concerned about the economic strain of increased residential energy bills and the demand that's put on our local power grid and water resources. I am also increasingly concerned about the lack of regulation around these data centers, as the city does not vote on building projects and cannot stop these projects once they are zoned.

I would like Kansas City to update its zoning codes to create a new category for data centers and I would like the city to place a one-year moratorium on the construction of data centers until

we can figure out the impact it has on our community and create better regulation around them. Data centers often promise to use renewable energy and to replenish water, but there are rarely checks on these promises and once they are built, I fear they operate with little oversight, causing Kansas City residents to foot the bill for their massive energy and water usage.

I would like to voice my opposition to these Kansas City data center construction projects without further regulation.

Thank you,

Hi,

I'm a Kansas Citian and have been following the news about a two data centers in the works in Kansas City — one at KCI Logistics off of I-29 and Mexico Avenue near the airport and one at I-435 and 169 highway.

I am gravely concerned about the negative ramifications that these data centers could have on our local environment, water resources, energy bills and energy consumption. Data centers are known to deplete local water sources, affect water pressure for residents, pollute the air and water and make energy bills for local residents soar.

Data centers are being built at a rapid rate across the nation, with two just in the Northland in the last year — the Meta data center near Smithville and the Google data center near Worlds of Fun that should be operating soon. Our energy bills saw a significant increase this summer, and I fear that four new data centers in Kansas City will make this worse. Just this September, [Ameren shut off power to 15,000 Missouri rate payers who could not pay their energy bills](#).

I am urging you to draw awareness to these proposed data centers and ask important questions about the impact they will have on our community. I am concerned about the economic strain of increased residential energy bills and the demand that's put on our local power grid and water resources. I am also increasingly concerned about the lack of regulation around these data centers, as the city does not vote on building projects and cannot stop these projects once they are zoned.

I would like Kansas City to update its zoning codes to create a new category for data centers and I would like the city to place a one-year moratorium on the construction of data centers until we can figure out the impact it has on our community and create better regulation around them. Data centers often promise to use renewable energy and to replenish water, but there are rarely checks on these promises and once they are built, I fear they operate with little oversight, causing Kansas City residents to foot the bill for their massive energy and water usage.

I would like to voice my opposition to these Kansas City data center construction projects without further regulation.

Thanks,
Julia Feuerborn

No Data Centers in KCMO

Good morning,

I'm a Kansas City resident and have been following the news about the two data centers in the works in Kansas City. One is planned to go up near KCI Logistics off of I-29 and Mexico Avenue near the airport and the other at I-435 and 169 highway.

I am gravely concerned about the negative ramifications that these data could have on our local environment, water resources, energy bills, and energy consumption. Data centers are known to deplete local water sources, affect water pressure for residents, pollute the air and water, and make energy bills for local residents soar. In a time when the cost of living keeps rapidly increasing, I don't see the sense in unnecessarily making bills even higher for KC residents.

Data centers are being built at a rapid rate across the nation, with two just in the Northland in the last year — the Meta data center near Smithville and the Google data center near Worlds of Fun that should be operating soon. Our energy bills saw a significant increase this summer, and I fear that four new data centers in Kansas City will make this worse. Just this September, [Ameren shut off power to 15,000 Missouri rate payers who could not pay their energy bills](#).

I am urging you to draw awareness to these proposed data centers and ask important questions about the impact they will have on our community. I am concerned about the economic strain of increased residential energy bills and the demand that's put on our local power grid and water resources. The lack of regulation around these data centers makes me incredibly worried about how quickly this can move forward without appropriate attention, as the city does not vote on building projects and cannot stop these projects once they are zoned.

I would like Kansas City to update its zoning codes to create a new category for data centers and I would like the city to place a one-year moratorium on the construction of data centers until we can figure out the impact it has on our community and create better regulation around them. Data centers often promise to use renewable energy and to replenish water, but there are rarely checks on these promises and once they are built. I fear they operate with little oversight, causing Kansas City residents to foot the bill for their massive energy and water usage.

I would like to voice my opposition to these Kansas City data center construction projects without further regulation.

Thank you for your time,
Alyssa Haverly

Dear members of City Council, the KC Port Authority, and the KC Spirit Playbook,

I am a concerned citizen who lives in Kansas City, and I have been paying attention to the upcoming data center proposals in the works for Kansas City -- one at KCI logistics off of I-29 and Mexico Avenue near the airport and one at I-435 and 169 highway.

I am very concerned about the negative effects that these data centers could have on our local environment, water resources, energy bills, and energy consumptions. Data centers are known to deplete local water resources, affect water pressure for residents, and pollute the air and water and make energy bills for local residents soar.

Data centers are being built across the nation, with two just in the Northland in the last year -- the Meta data center near Smithville and the Google data center near World's of Fun will be operating soon. Kansas City has already seen high energy bills in the summertime, and it seems that operating four data centers in KC will only make this worse. Just this September, [Ameren shut off power to 15,000 Missouri rate payers who could not pay their energy bills.](#)

I am urging you to draw awareness to these proposed data centers and ask important questions about the impact they will have on our community. I am concerned about the economic strain of increased residential energy bills and the demand that's put on our local power grid and water resources. I am also increasingly concerned about the lack of regulation around these data centers, as the city does not vote on building projects and cannot stop these projects once they are zoned. KC is already seeing high costs of living, as we are seeing around the country. This will further the divide between those who can and can't afford their bills, as well as increase the strain on everyone. And why? So someone can generate a bad image of a cat eating a pizza?

I would like Kansas City to update its zoning codes to create a new category for data centers and I would like the city to place a one-year moratorium on the construction of data centers until we can figure out the impact it has on our community and create better regulation around them. Data centers

often promise to use renewable energy and to replenish water, but there are rarely checks on these promises and once they are built, I fear they operate with little oversight, causing Kansas City residents to foot the bill for their massive energy and water usage.

I would like to voice my opposition to these data centers being built in KC without further regulation of their usage.

Thank you, and I will see you on Nov 5th for th public hearing on this issue.

-Mark

Hello city of Kansa City council members,

I'm a concerned citizen living in Kansas City and have been following the news about two data centers in the works in Kansas City — one at KCI Logistics off of I-29 and Mexico Avenue near the airport and one at I-435 and 169 highway.

I am gravely concerned about the negative ramifications that these data centers could have on our local environment, water resources, energy bills and energy consumption. Data centers are known to deplete local water sources, affect water pressure for residents, pollute the air and water and make energy bills for local residents soar.

Data centers are being built at a rapid rate across the nation, with two just in the Northland in the last year — the Meta data center near Smithville and the Google data center near Worlds of Fun that should be operating soon. Our energy bills saw a significant increase this summer, and I fear that four new data centers in Kansas City will make this worse. Just this September, [Ameren shut off power to 15,000 Missouri rate payers who could not pay their energy bills](#).

I am urging you to draw awareness to these proposed data centers and ask important questions about the impact they will have on our community. I am concerned about the economic strain of increased residential energy bills and the demand that's put on our local power grid and water resources. I am also increasingly concerned about the lack of regulation around these data centers, as the city does not vote on building projects and cannot stop these projects once they are zoned.

I would like Kansas City to update its zoning codes to create a new category for data centers and I would like the city to place a one-year moratorium on the construction of data centers until we can figure out the impact it has on our community and create better regulation around them. Data centers often promise to use renewable energy and to replenish water, but there are rarely

checks on these promises and once they are built, I fear they operate with little oversight, causing Kansas City residents to foot the bill for their massive energy and water usage.

I would like to voice my opposition to these Kansas City data center construction projects without further regulation.

Greetings,

I am a concerned citizen living in Kansas City and have been following the news about two data centers in the works in Kansas City, one at KCI Logistics off of I-29 and Mexico Avenue near the airport and one at I-435 and 169 highway.

I am sincerely concerned about the negative ramifications that these data centers may have on our local environment, water resources, energy bills and energy consumption. Data centers are known to deplete local water sources, affect water pressure for residents, pollute the air and water and make energy bills for local residents soar.

Data centers are being built at a rapid rate across the nation, with two just in the Northland in the last year, the Meta data center near Smithville and the Google data center near Worlds of Fun that should be operating soon. Our energy bills saw a significant increase this summer, and I fear that four new data centers in Kansas City will make this worse. Just this September, [Ameren shut off power to 15,000 Missouri rate payers who could not pay their energy bills](#).

I am urging you to draw awareness to these proposed data centers and ask important questions about the impact they will have on our community. I am concerned about the economic strain of increased residential energy bills and the demand that's put on our local power grid and water resources. I am also increasingly concerned about the lack of regulation around these data centers, as the city does not vote on building projects and cannot stop these projects once they are zoned.

I would like Kansas City to update its zoning codes to create a new category for data centers and I would like the city to place a one-year moratorium on the construction of data centers until we can figure out the impact it has on our community and create better regulation around them. Data centers often promise to use renewable energy and to replenish water, but there are rarely checks on these promises, and once they are built I fear they will operate with little oversight, causing Kansas City residents to foot the bill for their massive energy and water usage.

I would like to voice my opposition to these Kansas City data center construction projects without further regulation.

Much gratitude,
~Ms. Maranda Stevens

KC Data Centers

Good afternoon,

I'm a concerned Kansas City resident. I have been following the news about two data centers in the works in Kansas City — one at KCI Logistics off of I-29 and Mexico Avenue, and the Mica Project at I-435 and 169 highway.

I am gravely concerned about the negative ramifications that these data centers could have on our local environment, water resources, energy bills and energy consumption. Data centers are known to deplete local water sources, affect water pressure for residents, pollute the air and water and make energy bills for local residents soar. I'm concerned for the wildlife in these areas. We must consider the ramifications for our natural world.

Data centers are being built at a rapid rate across the nation, with two just in the Northland in the last year — the Meta data center near Smithville and the Google data center near Worlds of Fun that should be operating soon. Our energy bills saw a significant increase this summer, and I fear that four new data centers in Kansas City will make this worse. Just this September, [Ameren shut off power to 15,000 Missouri rate payers who could not pay their energy bills](#).

I am urging you to research in depth these proposed data centers and ask important questions about the impact they will have on our community and our wildlife. I am concerned about the economic strain of increased residential energy bills and the demand that's put on our local power grid and water resources. I am also increasingly concerned about the lack of regulation around these data centers, as the city does not vote on building projects and cannot stop these projects once they are zoned.

I would like Kansas City to update its zoning codes to create a new category for data centers and I would like the city to place a one-year moratorium on the construction of data centers until we can figure out the impact it has on our community and create better regulation around them. Data centers often promise to use renewable energy and to replenish water, but there are rarely

checks on these promises and once they are built, I fear they operate with little oversight, causing Kansas City residents to foot the bill for their massive energy and water usage.

I would like to voice my opposition to these Kansas City data center construction projects without further regulation.

Sincerely,

Alexandra W Tramposh

Hi,

I'm a concerned citizen living just north of Kansas City near the airport. I have been following the news about a two data centers in the works in Kansas City — one at KCI Logistics off of I-29 and Mexico Avenue near the airport and one at I-435 and 169 highway.

I am gravely concerned about the negative ramifications that these data could have on our local environment, water resources, energy bills, energy consumption, and health. Data centers are known to deplete local water sources, affect water pressure for residents, pollute the air and water and make energy bills for local residents soar. Polluting our air and water negatively impacts our health and longevity.

Data centers are being built at a rapid rate across the nation, with two just in the Northland in the last year — the Meta data center near Smithville and the Google data center near Worlds of Fun that should be operating soon. Energy bills saw a significant increase this summer, and I fear that four new data centers in Kansas City will make this worse. Just this September, [Ameren shut off power to 15,000 Missouri rate payers who could not pay their energy bills](#).

I am urging you to draw awareness to these proposed data centers and ask important questions about the impact they will have on our community. I am concerned about the economic strain of increased residential energy bills and the demand that's put on our local power grid and water resources. I am also increasingly concerned about the lack of regulation around these data centers, as the city does not vote on building projects and cannot stop these projects once they are zoned.

I would like Kansas City to update its zoning codes to create a new category for data centers and I would like the city to place a one-year moratorium on the construction of data centers until we can figure out the impact it has on our community and create better regulation around them. Data centers often promise to use renewable energy and to replenish water, but there are rarely checks on these promises and once they are built, I fear they operate with little oversight, causing Kansas City residents to foot the bill for their massive energy and water usage.

I would like to voice my opposition to these Kansas City data center construction projects without further regulation.

Kansas City Data Centers Concerns and Opposition

From Bralyn Wilson <bwilson898@yahoo.com>

Date Mon 10/27/2025 8:27 PM

To Williams, Gerald <Gerald.Williams@kcmo.org>; Reinhardt, Jennifer <Jennifer.Reinhardt@kcmo.org>; Elliott, Kyle <Kyle.Elliott@kcmo.org>

EXTERNAL: This email originated from outside the kcmo.org organization. Use caution and examine the sender address before replying or clicking links.

Hello,

My name is Bralyn Wilson, I am a concerned citizen and registered voter living in Kansas City reaching out to express my concerns on the building of data centers in Kansas City. I have been following the news about two data centers in the works in Kansas City — one at KCI Logistics off of I-29 and Mexico Avenue near the airport and one at I-435 and 169 highway.

I am gravely concerned about the negative ramifications that these data could have on our local environment, water resources, energy bills and energy consumption. Data centers are known to deplete local water sources, affect water pressure for residents, pollute the air and water and make energy bills for local residents soar.

Data centers are being built at a rapid rate across the nation, with two just in the Northland in the last year — the Meta data center near Smithville and the Google data center near Worlds of Fun that should be operating soon. Our energy bills saw a significant increase this summer, and I fear that four new data centers in Kansas City will make this worse. Just this September, [Ameren shut off power to 15,000 Missouri rate payers who could not pay their energy bills](#).

I am urging you to draw awareness to these proposed data centers and ask important questions about the impact they will have on our community. I am concerned about the economic strain of increased residential energy bills and the demand that's put on our local power grid and water resources. I am also increasingly concerned about the lack of regulation around these data centers, as the city does not vote on building projects and cannot stop these projects once they are zoned.

I would like Kansas City to update its zoning codes to create a new category for data centers and I would like the city to place a one-year moratorium on the construction of data centers until we can figure out the impact it has on our community and create better regulation around them and a process for citizens to have more input over whether or not data centers are built in their communities. And, if data centers are built, to have regulations in place to hold data centers accountable for the impact on the communities and environments they are in. Data centers often promise to use renewable energy and to replenish water, but there are rarely checks on these promises and once they are built, I fear they operate with little oversight, causing Kansas City residents to foot the bill for their massive energy and water usage.

I would like to voice my opposition to these Kansas City data center construction projects without further regulation.

Best Wishes,
Bralyn Wilson
