Subject: Data Centers And Kansas City's Future

EXTERNAL: This email originated from outside the kcmo.org organization. Use caution and examine the sender address before replying or clicking links.

Dear Council Members and Planning Personnel,

I am a mother located in the Northland who is incredibly concerned for my family's and Kansas City's future regarding the new data centers coming to the northland and elsewhere. The ultimate cost seems to outweigh any benefit in regards to our environment, water quality, and cost of living, to name a few.

We are a single income family who are continually working towards lowering our energy usage due to rising costs. However, though our energy usage keeps lowering from year to year, the cost continues to rise when compared to the previous season. We can't help, but look at our bills and wonder if electricity and other energy will soon become more than we keep up with.

We love Kansas City, always have and always will, but we would not have chosen to move here if we had known that four data centers were going to be built in the northland. When we inevitably move our family in the next few years, we now discuss whether we want to stay in Kansas City at all. This is due to light, air, water, and noise pollution the centers will bring. It also goes to reason that our home will be devalued in the long run as research continues to find more health concerns with PFAS and other negative effects of pollution consistent with running data centers.

Below is a copy of an email I am sure you have already received. We whole heartedly agree with the request below, and are gutted to even be in this situation.

Thank you for your time,

Lauren Tan
8820 N Oak Trfy, Kansas City, MO 64155

The zoning code proposed for data centers in Kansas City is insufficient and does not adequately address citizen concerns over the huge impact that these data centers have on the communities in which they are built. The zoning code, as currently drafted, does not do enough to protect Kansas Citians from utility rate increases, pollution and environmental concerns. There are major hyperscale data center projects in the works in Kansas City that have gone underway without public input. Our city must quickly act in order to rein in the rampant construction of data centers in our city that are being constructed without sufficient regulation.

The data center zoning code for Kansas City should not be lumped in with Large Format Uses and should instead be its own zoning code. It should also require special-use permits for data centers that are voted on and approved by the city council or other governmental committees instead of being approved by right as they currently are. In addition, data centers should only be zoned in industrial areas and people in the vicinity should be notified when there is a proposed data center nearby — something Smithville residents were not privy to when the Meta and Google data centers went up in their backyards. To address environmental concerns, the zoning code should require environmental impact studies, limit fossil-fuel backup generators, have limits on water usage and also mandate cooling requirements so no potable water is used in their systems. In consideration of economic concerns, we should require utility disclosures from data centers and ask for a renegotiation of permit approval so we can make sure the data centers do not become too burdensome in order to monitor the strain on the energy grid and potential water pollution.

The current zoning code needs more protection for Kansas City residents from the impacts of data centers. It does not protect them from going up in people's backyards, does not do enough to protect our community's environment and local resources like water, and it does not protect Kansas Citians from bearing the brunt of the cost of utility rate increases.

Please consider these concerns when adopting a zoning code for data centers.
