---

Dear Neighborhoods Planning and Development Committee,

I urge you to ask for amendments to the currently proposed zoning code being brought to the Neighborhoods Planning and Development committee on Dec. 9th. The zoning code proposed for data centers, as currently drafted, is insufficient in protecting the interests and health of everyday Kansas Citians.

Data centers across the country have been shown to be excessively pollute their communities, causing unnecessary health problems like cancer, miscarriages, and respiratory illnesses. Putting one of these in our own backyard is willfully ignorant and dangerous, I don't care how much money they give you. It will not add to the quality of life in our city. It will not create jobs. It will only increase the utility costs for the people and make them sicker and sicker and pollute our fragile environment. I am begging you all to put people and our planet before the interests of corporations.

I urge you to be proactive about minimizing these harms by creating a zoning code that allows for more oversight in the following ways. The data center zoning code should:

Be its own zoning code rather than lumped in with Large Format Uses.

Require special-use permits for data centers that are voted on and approved by the city council.

Include environmental impact studies.

Include environmental protections such as limiting water usage/cooling requirements and limiting fossil-fuel generators (including back-ups).

Require utility demand disclosure.

Require ample distance from residential neighborhoods.

If data center development is allowed to continue as is, Kansas Citians will be forced to bear the brunt of the cost of utility rate increases, resource extraction, and pollution. Do right by Kansas Citians and demand a more thorough zoning code for data centers.

Thank you,

Bailey Wilson
