In determining the amount actually paid to qualified MBEs and WBEs, no credit will be given for the portion of participation that was not approved by the Director of City's Human Relations Division, unless the Director determines that the Contractor acted in good faith. No deduction for liquidated damages will be made when, for reasons beyond the control of the Contractor, the M/WBE participation stated in the Contractor Utilization Plan, as amended and approved by the Director, is not met.

Once the original as-built locations are marked, locating will commence. Pigging operations will utilize soft foam pigs and tracking sondes to identify the X, Y, and Z coordinates of the existing pipelines providing horizontal and vertical details. The pigs will be tracked using locating wands to identify the pipe alignment every 300 feet and any change in direction, fitting or valve.
6. The Contractor shall photograph any visible appurtenances or exposed pipe found during the work. At least one photograph shall be taken at a vantage point that allows for at least one identifiable fixed landmark visible in the background or side ground and at least one photograph shall be taken in close proximity to the appurtenance or exposed pipe. The photographs shall include a plaque indicating the X/Y coordinates or stationing so that the photo can later be coordinated with the X/Y location.
7. During the cleaning or inspection process if a leak is found, regardless of the cause (pre-existing or caused by the cleaning or assessment work), the Contractor shall provide point repairs to correct the problem. The Contractor shall provide details of the repair and a schedule of values for each point repair, including delay time to assessment crew, to the City for approval prior to correcting them.
8. Following retrieval of the forcemain alignment verification equipment, the data will be subjected to a quality assurance (QA)/quality control (QC) process to ensure that the data is of a quality to accurately locate the forcemain. The accuracy of the data in the X, Y, and Z shall be sub meter (1.6ft). The QA'd/QC'd field data will be used to develop and deliver a summary report of the findings featuring the existing as built locations and the actual pipe alignment and offsets based on the City's current coordinate (horizontal) and datum (vertical) controls.
9. A shadow truck will be used for traffic control when the assessment personnel are in the street right-of-way.

### **C. Scope of Services - Forcemain Condition Assessment (Optional Services)**

In addition to the services listed above in the Scope of Services for the Forcemain Alignment verification, The Contractor shall provide the following if authorized by the City:

1. The Contractor shall provide any additional necessary cleaning and condition assessment inspection(s) to evaluate the internal condition of the force main. This includes providing all cleaning equipment, monitoring instruments, data acquisition, processing, hardware, software, and all ancillary electrical, instrumentation, communication, and other work as necessary to ensure force main cleaning, inspection, and the delivery of complete, quality data.
2. The Contractor shall submit a Work Plan for each assessment that includes, but is not limited to schedule, launching and retrieval locations or modifications, OCCP, break risks, anticipated traffic control needs, anticipated private property access needs, and approximate cost.
3. The internal inspection equipment shall have the capability for accurate location, identification, and assessment of internal force main defects, including encrustation, loss of wall material, air pockets, or offset joints. The internal inspection equipment shall be capable of providing accurate data during all anticipated conditions.
4. The inspection equipment shall include an array of ultrasonic sensors that emit and capture sound waves to detect any anomalies in the wall of the pipeline. Additional sensors including an inertial measurement unit, hydrophones, and odometers to capture sub meter accurate, leaks, debris, joint deflection, and ovality shall be included.
5. Following retrieval of the pipeline condition assessment equipment, the data will be subjected to a QA/QC process to ensure that the proper amount of data was captured during the inspection and that the data is of a quality suitable for analysis. The following data will be submitted following completion of the internal inspection:
  - a. Degradation of wall thickness:
  - b. Corrosion in metals (remaining wall thickness)
  - c. H<sub>2</sub>S deterioration
  - d. Angular displacement of joints (vertical and horizontal)
  - e. Joint gap width
  - f. Ovality
  - g. Axial deformation
  - h. Leaks
  - i. Contamination or debris at the bottom of the pipe
  - j. Gas pockets
6. The data shall be reviewed through an HTML dashboard containing a comprehensive overview of the pipeline anomalies. An interactive and dynamic dashboard shall be provided for data review and analysis. The exact length, width, and depth location (X, Y, and Z) of the inspected pipeline shall be displayed, to provide for the examination of each pipe part and joint along the inspected pipeline. Filters and specific criteria shall be provided so that the measured inspection data and condition, and any anomalies that may have been detected can be viewed.
