- Utilities
- Sanitary Sewer – the development is located within a Combined Sewer Overflow. An existing 18" diameter sanitary sewer on Madison Avenue along the west side of the property is available to serve the development. The sanitary sewer service line can be connected to the public sewer main via a tee or wye connection.
 - Water – an existing 6" diameter public water main located on Madison Avenue to the west of the proposed building is available to serve the development. Future testing for this main will be performed to confirm that adequate flow and pressure is available to adequately serve the proposed building. Design (by a licensed Plumbing Engineer) and installation of a booster pump may be necessary to meet these demands. If it is determined that the existing 6" water main in Madison Ave. is not adequate, a main extension may be needed. The existing 6" water main on Madison Avenue is slated to be upsized and replaced as part of the WSD water main replacement program and may be available for connection.
 - Gas – an existing 6" gas main is located on Madison Avenue along the west side of the property that is available to serve the development.
 - Electric – underground Every electric is located on Madison Avenue along the west side of the property that is available to serve the development.
